ISOVARA MONITORS

Know the moment your freezer starts to warm up

Round-the-clock monitoring with text and email alerts

WHY IT MATTERS

Things fail at 2 a.m., on holidays, and when nobody is looking

A freezer that quietly stops. A server closet that overheats. A garage door left open while you're away. Isovara notices first and tells you right away.

MADE FOR THE PLACES THAT MATTER

One monitor, many jobs

The restaurant walk-in

A probe on a long cable; no false alarms during defrost; a text before the stock thaws.

The server closet

Catches a sudden rise when the cooling fails, and alerts your IT ticketing system.

The greenhouse

Two built-in switches run a heater and a fan, even when the internet drops.

The cabin and the garage

Freeze warnings while you're away; a text when a garage door is left open.

HOW IT WORKS

Up and running in three steps

1

Connect

Power it up and join your Wi-Fi from the Manager app or your phone's browser.

2

Add it

Sign up on the web portal and type the code from the monitor's label.

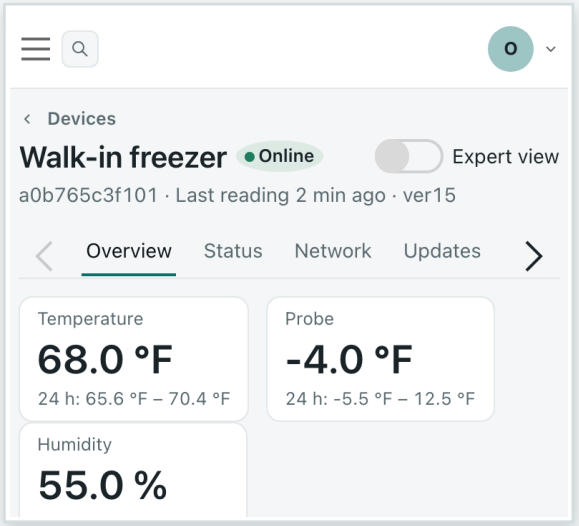

3

Set alerts

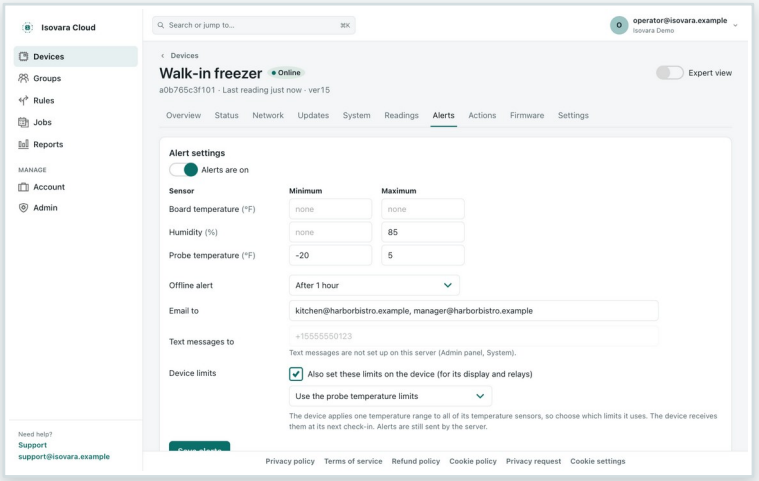

Pick your limits and who hears about it. Invite viewers if you like.

YOUR PORTAL AND APP

Everything your monitors see, in any browser

- Text and email alerts, per sensor
- A warning if a monitor stops reporting
- Ready-made rules: thaw risk, stuck defrost
- History and charts
- Viewers who see but can't change
- °F or °C, 12- or 24-hour, light or dark

Plus the Manager app for Android, Windows and Mac, to set monitors up nearby over Bluetooth.

WHY PEOPLE TRUST IT

Built to keep working and keep your data private

Works offline

Temperature control and the screen carry on without the internet.

Private

Each monitor has its own encrypted connection.

Safe updates

Every update is signed and checked before it installs.

Yours to pass on

Sell a monitor and your history is wiped for the new owner.

PLANS

A small fee per monitor, monthly or yearly

PER MONITOR	BASIC	PRO	BUSINESS
Price	[$ / mo]	[$ / mo]	[$ / mo]
Text, email and offline alerts	Yes	Yes	Yes
History	14 days	Long-term	Long-term
Status updates	Hourly	Every 15 min	Every 15 min
Your own rules and webhooks	No	Yes	Yes
API access	No	No	Yes

Example tiers. Your provider sets the names, features and prices.
